

# Ease-Guard® Pipes Assembly

## Reliable Tubing Solutions for DVT Compression Systems

Ease-Guard® Pipes Assembly is designed to provide practical tubing solutions for **DVT pneumatic compression pumps and compression sleeves**.

Our range of pipe and tubing assemblies is available in different configurations to accommodate various types of DVT compression machines and clinical requirements.

With multiple connector and tubing options, Ease-Guard® provides flexibility when setting up pneumatic compression therapy systems.

---

## A Range Designed for Different Machines

Ease-Guard® offers a range of pipe assemblies and connectors suitable for different types of DVT compression machines.

Our product range includes both **open tube assemblies and covered tube assemblies**, allowing healthcare facilities to select the configuration appropriate for their equipment and application.

### Open Tube Assemblies

The Ease-Guard® Open Tube Assembly range provides exposed pneumatic tubing with integrated connectors for connecting compression equipment and sleeves.

Different open-tube configurations are available to accommodate different machine and connection requirements.

#### Available Configurations

- Open Tube Assembly
  - Open Tube Assembly with machine-side tubing configuration
  - Open Tube Assembly with alternative connector configuration
  - Open Tube Assembly for different pump connection requirements
- 

### Covered Tube Assemblies

Ease-Guard® also offers **Covered Tube Assemblies**, providing tubing enclosed within a protective outer covering.

These assemblies are available in different configurations and connector arrangements to support compatibility with various DVT compression systems.

## Available Configurations

- Covered Tube Assembly
  - Covered Tube Assembly with alternative connector configuration
- 

## Connectors for Different DVT Machines

Ease-Guard® provides a range of connectors designed for use with **various kinds of DVT compression machines**.

The connector range includes different connection formats and multi-line configurations, allowing the appropriate assembly to be selected according to the requirements of the compression pump and sleeve system.

### Connector Options

- Single-line connection assemblies
  - Multi-line connector assemblies
  - Push-type connectors
  - Machine-specific connector configurations
  - Different connector arrangements for pneumatic compression systems
- 

## Designed for Ease of Connection

Ease-Guard® Pipes Assembly is developed to make the connection between the **DVT pump and compression sleeve** practical and convenient.

The range is designed around different machine connection requirements, helping healthcare facilities select the appropriate tubing and connector configuration for their pneumatic compression system.

---

## Complete Your Ease-Guard® Compression System

From **DVT sleeves to pumps, tubing assemblies, and connectors**, Ease-Guard® provides components designed to work together as part of a pneumatic compression therapy system.

**Multiple configurations. Flexible connection options. Designed for DVT compression systems.**
